TEAM ID	PNT2022TMID26833
PROJECT NAME	Personal Assistance for Seniors Who Are Self-Reliant

Sprint 2

software (Create device in the Iot watson platform, workflow for Iot scenarios using local NODE-RED)

Time Taken : 6 days

As we have completed our simulation test and briefing every objectives of the project . So we have

REQUIRED SOFTWARE:

MIT App, IBM Watson IoT Platform, IBM Cloud, IBM Node-RED, Jira Software

The question that are raised during our session How, When, why are doing the project .And had the session by Service was the main motive to be produced.

And what we did **on this** SPRINT 1 is that we **determined** the **aspect which might be wanted** for the **mission** and **carried out** a dry **check** and had a **stay dialogue consultation of ways** the **mission have to** be designed **and the way it's far** used **successfully via way of means of the usage of** required software.

How was required Software useful and how our team did it?

We used the **MIT App** to built to use the App that can be reached to End User.

IBM Node – RED used to connect all the process that are made by the MIT App and process the data .

IBM Watson IoT Platform is used to output to user but it is useful that it run on IBM Cloud.

Jira Software it is used for remainder for work is seen in the software and essentially gives the burn down chart which can seen that our work done of every week is reflected in the Jira Software.
